Composite Enclosures

Vaults

OVERVIEW

Composite enclosures are engineered to withstand heavy loads and provide a durable, lightweight solution for the protection of and access to vital utility infrastructure. The impressively light Duralite brand from OldCastle distributed by Connect weighs four times less than typical industry solutions and can deliver Tier22 performance. This uniquely strong material blend and design allow for the body to resist bowing, and yet can be modified with 18V power tools.

SPECIFICATIONS

Property	Value
